# Introducing

Gemini 3

Our most intelligent model for helping enterprises transform their businesses for the agentic future.

Gemini 3

Gemini 3 is now available for enterprises in Vertex AI and Gemini Enterprise. Google Cloud Blog

Today, we're bringing Gemini 3 Pro, our most intelligent model, to every developer and enterprise team.

It's the best model in the world for multimodal understanding, and our most powerful agentic and vibe-coding model yet.

State-of-the-art reasoning and multimodality

Gemini 3's powerful multimodal understanding makes sense of your data, no matter where it comes from. It is able to synthesize information about any topic across multiple modalities, including text, images, video, audio, and code.

Powerful agentic coding and front-end creation

Gemini 3, our most powerful agentic coding model yet, transforms application development. With a 1M token context window and industry-leading long context performance, Gemini 3 outperforms previous generations and can help developers be more efficient than ever before.

Advanced tool use and planning

Gemini 3 excels at helping enterprises build sophisticated agents for multi-step tasks and business planning, specifically because it has been trained for advanced tool use and complex planning capabilities.

What you can do with Gemini 3

State-of-the-art reasoning and multimodality

Applications can range from analyzing X-rays and MRI scans to assist in faster diagnostics, to analyzing streams of machine logs to anticipate equipment failure.

Key outcomes:
- Deeply understand any topic or dataset
- Make better, data-backed decisions

Rakuten

"From accurately transcribing 3-hour multilingual meetings with superior speaker identification, to extracting structured data from poor-quality document photos, **outperforming baseline models by over 50%.**"

Yusuke Kaji
General Manager, AI for Business, Rakuten Group, Inc.

Coding and front-end creation

Enterprises can rapidly prototype full front-end interfaces with a single prompt and leverage agentic coding to quickly move from prototype to production.

Key outcomes:
- Help technical teams do more, safely
- Accelerate legacy code migration and software testing

replit

"Gemini 3 Pro truly stands out for its design capabilities, **offering an unprecedented level of flexibility while creating apps.** Like a skilled UI designer, it can range from well-organized wireframes to stunning high-fidelity prototypes."

Michele Catasta
President & Head of AI, Replit

Tool use and planning

Businesses can now leverage improved agent-building structures to execute key tasks such as financial planning, supply chain adjustments, and contract evaluation.

Key outcomes:
- Build agents that help you forecast
- Pair strategy with agent execution

Thomson Reuters™

"Our early evaluations indicate that Gemini 3 is delivering state-of-the-art reasoning with depth and nuance. We have **observed measurable and significant progress** in both legal reasoning and complex contract understanding."

Joel Hron
Chief Technology Officer, Thomson Reuters

Try these industry use cases with Gemini 3 Pro

Deploy agentic workflows to drive efficiency, precision, and innovation across every sector.

🛒 Retail & CPG

Agentic shopping assistants

Build agents that follow complex, multi-step instructions (e.g., "Find a gift under $50 that arrives by Friday and is eco-friendly").

Multimodal catalog enrichment

Analyze product images and descriptions simultaneously to automatically extract structured data and generate rich metadata, improving search quality and discoverability.

💓 Healthcare and Life Sciences

Multimodal diagnostics

Analyze X-rays, MRI scans, and patient history simultaneously to assist clinicians in faster, more accurate diagnostics.

Medical research

Synthesize vast amounts of medical literature to accelerate drug discovery and trial planning.

▶️ Media and Entertainment

Intelligent asset management

Automatically generate transcripts and metadata for podcast and video content to make archives searchable and monetizable.

Community management and guidance

Build community companion agents that engage with audiences, monitor and detect harmful content, and provide meaningful session insights for creators.

Financial Services and legal

Contract analysis

Ingest thousands of pages of legal documents to identify risks, anomalies, and compliance issues with state-of-the-art reasoning.

Financial planning

Execute complex financial forecasting and budgeting tasks that require reasoning through multiple economic scenarios.

Manufacturing and operations

Predictive maintenance

Analyze real-time streams of machine logs and video feeds from factory floors to anticipate equipment failure before it happens.

Visual QA

Use multimodal vision capabilities to inspect products for defects on the assembly line in real-time.
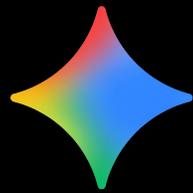

Software development

Legacy code migration

Leverage agentic coding capabilities to consume entire codebases, automating the modernization of brittle legacy systems and running software tests.

"Vibe-coding" and rapid prototyping

Empower teams to move from concept to execution instantly by generating full front-end interfaces and sophisticated UI components from a single prompt.

Available today

Gemini 3

For developers

You can start building with Gemini 3 Pro in Preview on Vertex AI today. Gemini 3 is also available in Google Antigravity, Gemini CLI, AI Studio, and more.

For business teams

You can access Gemini 3 Pro in Preview on Gemini Enterprise, our advanced agentic platform for teams to discover, create, share, and run AI Agents all in one secure platform. It's also available in Google Workspace via the Gemini App.

Introducing

✦ Gemini 3 Flash

Today, we're expanding the Gemini 3 model family with **Gemini 3 Flash**, which offers **frontier intelligence built for speed** at a fraction of the cost.

Gemini 3 Flash is rolling out globally starting today in Vertex AI and Gemini Enterprise.

Gemini 3 Flash is optimized for high-frequency workflows that demand speed **without sacrificing quality.**

Enterprises can now enjoy the benefits of **intelligence, at speed.**

Advanced Multimodal Processing

Process the world's information in real-time. Built on a native multimodal architecture, Gemini 3 Flash analyzes text, images, video, and audio with **sub-second latency** to extract actionable insights.

Cost efficient, High Performance Execution for Code and Agents at Scale

Automate complex workflows with precision. Gemini 3 Flash delivers exceptional performance on coding and agentic tasks, performing near the capabilities of premium models in key benchmarks at a lower price point.

Low Latency for Near Real-Time Experiences

Build agentic applications that feel immediate. Engineered for low latency, Gemini 3 Flash eliminates the lag often associated with intelligent models to provide seamless responsiveness.

Where Gemini 3 Flash specializes

Capabilities & Benefits

Advanced Multimodal Processing

- Multimodal Insight at Scale
- High-Volume Document Processing
- Production-Ready Throughput

Cost efficient, High Performance Execution for Code and Agents at Scale

- Cost-Effective Intelligence
- Accelerated Development Cycles
- Reliable Instruction Following

Low Latency for Near Real-Time Experiences

- Real-Time Engagement
- Seamless Conversational Interfaces
- Time-Sensitive Decisioning

What Enterprises can do with Gemini 3 Flash

Key Use Cases

<> Software Development

Code Generation & Review

Helps speed up developer work cycles significantly with near real-time answers, and fewer resources (tokens) necessary to solve problems. Developers can stay in their **"flow" state with less interruption.**

👥 CRM and Sales

Automated Summarization & RAG

Helps eliminate "busy work" for sales teams by reading through complex data (i.e. long email chains) and extracts exactly what is needed. This means sales reps spend **less time entering data and more time selling.**

▶ Media & Creative

Real-time Generation

With near-real time responses, creative tools can now feel like "magic", helping to make the AI feel like a collaborative partner rather than a slow processing tool.

Start building with frontier intelligence, at speed...
